EV Battery Health Certificate

Tested with Bosch KTS 590 / ESItronic 2.0

Ref: AZ-JK5U2Y2A0R
Issued: 13 March 2026

KN72ZRT

Vehicle Details

Make / Model	**Skoda Enyaq IV 80**
Year	**2022**
Colour	**Blue**
Fuel Type	**Electric**
VIN (last 6)	**019837**
Mileage at Test	**N/A**
First Registered	**01/09/2022**

94%
State of Health
EXCELLENT

Battery Status

Gross Capacity: 77 kWh
Usable Capacity: 73.5 kWh
WLTP Range (new): 339 miles
Charge Rate: 11 kW AC / 135 kW DC

BOSCH
KTS 590 / ESItronic 2.0

Battery Warranty

IN WARRANTY

Warranty: 8 years / 100,000 miles | SoH threshold: 70%

Assessment Summary

The battery State of Health reading is 94%, which is within normal parameters for a 2022 vehicle with 0 miles on the odometer. In practical terms, you can expect a typical driving range of 271 miles under normal conditions, though this could drop to 207 miles in worst-case scenarios such as cold weather or aggressive driving. The warranty status could not be determined, meaning you would need to verify coverage directly with Skoda or an authorized dealer before purchase. The battery shows minimal degradation consistent with a low-mileage vehicle of this age.

Range Estimates (Miles)

Scenario	When New	At 94% SoH	Difference
Best Case (Urban)	**322 miles**	**303 miles**	-19 miles
Typical (Mixed Driving)	**288 miles**	**271 miles**	-17 miles
Worst Case (Winter Motorway)	**220 miles**	**207 miles**	-13 miles

Tested with Bosch KTS 590 / ESItronic 2.0

Ref: AZ-JK5U2Y2A0R
Issued: 13 March 2026

Charging Compatibility

AC: Type 2 — 11 kW

DC: CCS — 135 kW

AC connector: Type 2

DC connector: CCS

Clean Air & Tax Status

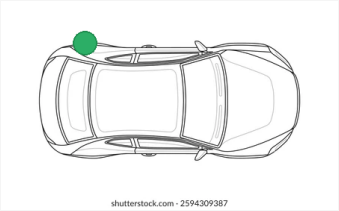
ULEZ: Exempt

CAZ: Exempt

VED: £0/year

Qualifies for free entry into all UK Clean Air Zones and ULEZ.

Charging Port Location



Rear Right

SoH Grading Scale

Excellent	90% – 100%	Battery is performing at or near its original capacity.
Good	80% – 89%	Normal degradation for the vehicle's age and mileage.
Fair	70% – 79%	Noticeable capacity loss; still functional for daily use.
Poor	60% – 69%	Significant degradation; reduced range may affect usability.
Critical	Below 60%	Severe degradation; battery replacement may be advisable.

Methodology

1. Diagnostic Data Collection

Battery State of Health (SoH) data is read directly from the vehicle's on-board diagnostic system using a Bosch KTS 590 diagnostic unit running ESItronic 2.0 Online software. The OBD-II port provides access to the battery management system's reported health metrics.

2. Range Estimation

Estimated real-world range is calculated by applying the measured SoH percentage to the manufacturer's WLTP-rated range, then adjusting for three driving scenarios: Best Case (Urban, ×0.95), Typical (Mixed, ×0.85), and Worst Case (Winter Motorway, ×0.65). All calculations use verified manufacturer specifications.

Diagnostic Equipment

BOSCH KTS 590

ESItronic 2.0 Online — Professional OBD-II diagnostic platform

Range Insights

Range estimates are provided for three driving scenarios reflecting the most common and the highest/lowest range you can expect.

These figures are estimates and subject to variability. Factors like driving mode, climate control, and driving style will affect the range achieved on a full charge.

The WLTP combined range for this car is 339 miles when new.

Important Notes

SoH readings are taken at a single point in time and reflect the battery's condition on the date of testing only.

Battery performance can vary based on charging habits, temperature, and driving patterns.

Frequent rapid charging may accelerate battery degradation and should be minimised where possible for long-term battery health.

This report is not a substitute for a full vehicle inspection or manufacturer assessment.

Disclaimers

1. This certificate is an independent assessment based on data obtained from the vehicle's on-board diagnostic systems and published manufacturer specifications. It is not issued, endorsed, or verified by the vehicle manufacturer.
2. The State of Health (SoH) reading represents the battery's condition at the time of testing only. Battery performance can change over time due to usage patterns, charging habits, temperature exposure, and other environmental factors.
3. Range estimates are calculated using a fixed formula applied to the manufacturer's WLTP-rated range and are provided for illustrative purposes only. Actual range will vary depending on driving conditions, speed, payload, climate control use, and other factors.
4. This certificate does not constitute a warranty, guarantee, or binding commitment regarding the vehicle's battery performance, reliability, or lifespan. It should be used as one input among several when evaluating a used electric vehicle.
5. Any modifications or subsequent changes to the vehicle or its battery management system after the date of this certificate may render the findings invalid. AZ Autos accepts no liability for decisions made on the basis of this certificate.

Battery Warranty vs Vehicle Warranty

- EVs typically come with two separate warranties: one for the vehicle and one for the battery inside the vehicle.
- Vehicle warranties typically last 3–5 years and cover faults with the motor, drivetrain, electronics and control systems. Speak to your EV retailer for details.
- The battery warranty provides protection against accelerated degradation and battery faults. It covers the performance of the battery, ensuring SoH does not drop below the manufacturer's stated threshold during the warranty period.
- This report provides the status of the vehicle in the context of the manufacturer's battery warranty. Additional criteria may be required from the manufacturer to validate a claim.

About AZ Autos

AZ Autos is a trusted used car dealership based in Letchworth Garden City, Hertfordshire. We specialise in quality pre-owned electric and hybrid vehicles, providing transparent battery health assessments to help buyers make informed decisions.

Every EV we sell undergoes a comprehensive battery health check using professional-grade diagnostic equipment. This certificate is part of our commitment to transparency and customer confidence in the used EV market.
